Application: Spring Internship 2027 – AI & Data Track

Dear Hiring Team,

I am applying for the AI & Data track of Accenture's Spring Internship. I started my Master's in AI and Language because I think this is a genuinely exciting time to be studying the field. Language models have gone from research demos to things companies actually build products around in just a couple of years, and I want to understand that shift well enough to help build with it, not just use it. What draws me to Accenture specifically is the consulting model itself: sitting with clients and translating that technology into decisions they can actually make, not leaving it as a research result.

During my internships with IBM Client Engineering, I sat in client workshops and saw how much a good recommendation depends on explaining data clearly to people who aren't data people. This is the part of this role I am most drawn to.

At Bosch Research, I built a Spark pipeline processing over 30 billion records, and during an internship at IBM Research, I designed an evaluation framework for large language models. I like turning messy data into something a client can actually act on.

I would welcome the opportunity to discuss my application further.

Best regards,
Leonard Eckert
