Profile

Master's student in AI and Language at Stockholm University with a strong technical foundation and a track record of working directly with clients. Across eight international internships with IBM Research and IBM Client Engineering, led client-facing workshops, deployed demos during live engagements, and translated technical findings into recommendations people without a data background could act on. Builds and evaluates AI systems hands-on, from LLM evaluation frameworks to LangChain-based agents, and brings a fast, analytical approach to unblocking problems. Based in Stockholm and looking to combine studies with high-ownership, part-time work.

Technical Skills

Languages & Frameworks: Java, Python, C, SQL, R, Spring Boot, React.js, LangChain
Cloud & Tools: Databricks, Apache Spark, Azure, Bicep, OpenShift, Docker, Git, Linux, Neo4j, GraphQL, Kafka

Education

Stockholm University — Stockholm, Sweden
Master of Science, AI and Language — *Aug. 2026 – Aug. 2028*

- Coursework spans computational linguistics, machine learning, and language technology
- Builds on Bachelor's thesis work on NLP agents and semantic alignment for natural language generation

DHBW Stuttgart — Stuttgart, Germany
Bachelor of Science, Business Information Systems (Data Science) — *Sep. 2022 – Sep. 2025*

- Dual/cooperative study program: alternated academic terms with practical placements at IBM
- Thesis: Design and Implementation of a Semantic Alignment Agent for Natural Language Generation (1.4 German GPA, top 10% of the year)

Karlstad University — Karlstad, Sweden
Exchange Semester — *Jan. 2024 – June 2024*

Deutsches Elektronen-Synchrotron (DESY) — Hamburg, Germany
IHK-Certified Apprenticeship, Computer Science Expert (SW Dev.) — *Sep. 2019 – July 2022*

- Dual vocational training combining vocational-school coursework with on-the-job work as a Junior Java Developer at this physics research institute
- Development of a distributed file system for scientific data, dCache, in Java
- Exams passed with excellent grades (93%), top 5% of the year

Work Experience

Data Engineer — Sep. 2025 – Now
Bosch Research — *Stuttgart, Germany*

- Developed and maintained a Databricks data pipeline written in Python and Apache Spark
- Built a high-performance Apache Spark application processing over 30 billion records while reliably parsing MF4 files (an industry-standard format for CAN bus systems)
- Supported the infrastructure team with platform development in MS Azure using Bicep

QA Engineer (Fulltime Role) — Apr. 2019 – Aug. 2019
Unitymedia via Prodapt Solutions Pvt. Ltd. — *Cologne, Germany*

- Created a resource planning tool with Excel and VBA
- Test execution and test planning for a B2B platform
- Testing internal tools with IBM AS400

Internships

IBM Client Engineering
Intern – Vienna, Austria *June 2025 – Sep. 2025*
- Developed an innovative agent-based demo using WatsonX Orchestrate for partner enablement
- Performed advanced data analysis using Python to process and extract insights from complex datasets

Intern – Singapore *Sep. 2024 – Nov. 2024*
- Built and deployed a containerized application on OpenShift to analyze JVM garbage collector memory allocation in Java
- Created presentation materials for client-facing workshops

Intern – Stuttgart Ehningen, Germany *Dec. 2022 – Mar. 2023*
- Built multiple prototypes for Watson OpenScale to monitor LLM performance on IBM Cloud Pak for Data
- Deployed a demo cluster on OpenShift in a successful client engagement
- Collaborated with an offshore team in India to troubleshoot and resolve issues

IBM Research
Research Intern – Dublin, Ireland *Feb. 2025 – May 2025*
- High focus on development of the NLP agent for my Bachelor thesis
- Developed a custom LangChain component integrating LLaMA, DeepSeek, and Granite models into a unified interface

Research Intern – Dublin, Ireland *June 2024 – Sep. 2024*
- Designed and implemented a smart evaluation framework for Large Language Models, focusing on tailored performance metrics in Python
- Containerized and deployed the application for scalable and reproducible execution

Research Intern – Zürich Rüschlikon, Switzerland *June 2023 – Sep. 2023*
- Implemented a custom schema for polymorphic GraphQL in Java
- Built a small demo in Neo4j to model and visualize a knowledge graph
- Modified an existing Kafka consumer to improve data processing efficiency

IBM Consulting Wilhelmshaven, Germany
Intern *Nov. 2023 – Jan. 2024*
- Contributed to a SASPF (SAP Bundeswehr solution) project for the German Navy
- Supported a project to improve material readiness and availability

Testbirds GmbH Munich, Germany
Project Management Intern *Oct. 2018 – Mar. 2019*
- Completed crowd test evaluation, including a presentation of the results to clients
- Template development in Excel and with Power BI and R

Selected Projects

Hippo Codes 2024 – present
- Full-stack development of a game addressing the consequences of climate change
- Sole developer responsible for the complete implementation, including the CI/CD pipeline – hippo-codes.com

Semantix Nov. 2024 – Feb. 2025
- Built a German word-guessing minigame leveraging word embeddings with vector search powered by Pinecone
- Deployed using Vercel – semantix-green.vercel.app

EveryOneCounts.de *(Founded after a hackathon against the covid pandemic)* Mar. 2020 – Aug. 2020
- Visualized social distancing in the corona pandemic using multiple data sources
- Project went viral and I talked about it in the media – Tagesschau feature
- Developed a customer-counting prototype using 3D printing and an ESP32 in C

Languages

German – native speaker, English – business fluent, Swedish – advanced

Additional

Volunteering: Working as a trained paramedic at events (03/2016 – 02/2020)
Interests: Machine learning, 3D printing, economics, photography, flight simulation, skiing
Driver's license: German driver's license Class B (Cars)
