Advisense
Forward Deployed AI Engineering Intern
Stockholm

Dear Hiring Team,

I'm applying for the Forward Deployed AI Engineering Internship in Stockholm. I'm pursuing a Master's in AI and Language at Stockholm University, and this role appeals to me because it combines building software end-to-end with using AI tools to do it well.

I maintain Hippo Codes on my own, including its CI/CD pipeline, and built a REST API and React frontend for a custom database system. At IBM Research, I built a custom LangChain component integrating LLaMA, DeepSeek, and Granite models, and I'm currently building Python and Spark pipelines processing tens of billions of records at Bosch Research.

I'd welcome the chance to talk more about the role.

Best regards,
Leonard Eckert
