Velory
AI & Automation Intern
Stockholm

Dear Hiring Team,

I'm applying for the AI & Automation Intern role in Stockholm. After speaking with Emma Nordin Forsberg and Sebastian Fuchs about the team and the role, I'm even more convinced that Velory's employee-centric approach and the emphasis on taking initiative and owning problems end-to-end is exactly the kind of environment I want to work in.

I maintain Hippo Codes on my own, including its CI/CD pipeline, and built a custom LangChain component integrating LLaMA, DeepSeek, and Granite models during an internship at IBM Research. I'm comfortable with SQL and Excel from my Data Science background, and I've given client-facing presentations and workshops during internships with IBM. I also enjoy the structured, administrative side of project work – documentation, tracking, follow-up – as much as the technical side.

I'd welcome the chance to talk more about the role.

Best regards,
Leonard Eckert
