PROFILE

Data-driven computer scientist with hands-on experience across data engineering, NLP, and cloud platforms, gained through eight international internships with IBM Research and IBM Client Engineering as well as a role as a Data Engineer at Bosch Research. Combines a strong software-development foundation from an apprenticeship at DESY with applied AI research from a Bachelor's thesis on a semantic alignment agent for natural language generation. Currently pursuing a Master's degree in AI and Linguistics at Stockholm University, with a continued interest in building intelligent, data-driven systems.

EDUCATION

Stockholm University <i>Master of Science, AI and Linguistics</i>	Stockholm, Sweden Aug. 2026 – Aug. 2028
DHBW Stuttgart <i>Bachelor of Science, Business Information Systems (Data Science)</i>	Stuttgart, Germany Sep. 2022 – Sep. 2025
- Dual/cooperative study program: alternated academic terms with practical placements at IBM - Thesis: Design and Implementation of a Semantic Alignment Agent for Natural Language Generation (1.4 German GPA, top 10% of the year)	
Karlstad University <i>Exchange Semester</i>	Karlstad, Sweden Jan. 2024 – June 2024
Deutsches Elektronen-Synchrotron (DESY) <i>IHK-Certified Vocational Apprenticeship, Computer Science Expert (Software Development)</i>	Hamburg, Germany Sep. 2019 – July 2022
- Dual vocational training combining vocational-school coursework with on-the-job work as a Junior Java Developer at this physics research institute - Development of a distributed file system for scientific data, dCache, in Java - Exams passed with excellent grades (93%), top 5% of the year	

WORK EXPERIENCE

Data Engineer <i>Bosch Research</i>	Sep. 2025 – Now Stuttgart, Germany
- Developed and maintained a Databricks data pipeline written in Python - Supported the infrastructure team with platform development in MS Azure	
QA Engineer (Fulltime Role) <i>Unitymedia via Prodapt Solutions Pvt. Ltd.</i>	Apr. 2019 – Aug. 2019 Cologne, Germany
- Created a resource planning tool with Excel and VBA - Test execution and test planning for a B2B platform - Testing internal tools with IBM AS400	

INTERNSHIPS

IBM Client Engineering <i>Intern – Vienna, Austria</i>	June 2025 – Sep. 2025
- Developed an innovative agent-based demo using WatsonX Orchestrate for partner enablement - Performed advanced data analysis using Python to process and extract insights from complex datasets	
IBM Client Engineering <i>Intern – Singapore</i>	Sep. 2024 – Nov. 2024
- Built and deployed a containerized application on OpenShift to analyze JVM garbage collector memory allocation in Java - Created presentation materials for client-facing workshops	
IBM Client Engineering <i>Intern – Stuttgart Ehningen, Germany</i>	Dec. 2022 – Mar. 2023
- Built multiple prototypes for Watson OpenScale to monitor LLM performance on IBM Cloud Pak for Data - Deployed a demo cluster on OpenShift in a successful client engagement - Collaborated with an offshore team in India to troubleshoot and resolve issues	
IBM Research <i>Research Intern – Dublin, Ireland</i>	Feb. 2025 – May 2025
High focus on development of the NLP agent for my Bachelor thesis	

- Developed a custom LangChain component integrating LLaMA, DeepSeek, and Granite models into a unified interface

Research Intern – Dublin, Ireland

June 2024 – Sep. 2024

- Designed and implemented a smart evaluation framework for Large Language Models, focusing on tailored performance metrics in Python
- Containerized and deployed the application for scalable and reproducible execution

Research Intern – Zürich Rüschlikon, Switzerland

June 2023 – Sep. 2023

- Implemented a custom schema for polymorphic GraphQL in Java
- Built a small demo in Neo4j to model and visualize a knowledge graph
- Modified an existing Kafka consumer to improve data processing efficiency

IBM Consulting

Wilhelmshaven, Germany

Intern

Nov. 2023 – Jan. 2024

- Contributed to a SASPF (SAP Bundeswehr solution) project for the German Navy
- Supported a project to improve material readiness and availability

Testbirds GmbH

Munich, Germany

Project Management Intern

Oct. 2018 – Mar. 2019

- Completed crowd test evaluation, including a presentation of the results to clients
- Template development in Excel and with Power BI and R

SELECTED PROJECTS

Hippo Codes

2024 – present

- Full-stack development of a game addressing the consequences of climate change
- Sole developer responsible for the complete implementation, including the CI/CD pipeline

Semantix

Nov. 2024 – Feb. 2025

- Built a German word-guessing minigame leveraging word embeddings with vector search powered by Pinecone
- Deployed using Vercel – semantix-green.vercel.app

Minecraft Open Database (MCODBC)

Mar. 2021 – present

- Co-developed a custom database language, Slim SQL, inspired by MySQL, in Java
- Created a small website for database requests and documentation in React.js
- Provided a REST API to interact with the Slim SQL database using Java Spring Boot

EveryOneCounts.de (*Founded after a hackathon against the covid pandemic*)

Mar. 2020 – Aug. 2020

- Visualized social distancing in the corona pandemic using multiple data sources
- Project went viral and I talked about it in the media – [Tagesschau](#) feature
- Developed a prototype to count customers in public spaces using 3D printing and an ESP32 in C

KNOWLEDGE AND INTERESTS

Languages: German – native speaker, English – business fluent, Swedish – beginner

Volunteering: Working as a trained paramedic at events (03/2016 – 02/2020)

Technologies: Java, Python, Excel, R, VBA, C, SQL, Docker, Linux, RaspberryPi, git, Neo4j

Interests: Machine learning, 3D printing, economics, photography, flight simulation, skiing

Driver's license: German driver's license Class B (Cars)
