PROFILE

Data-driven computer scientist with hands-on experience across data engineering, NLP, and cloud platforms, gained through eight international internships with IBM Research and IBM Client Engineering as well as a role as a Data Engineer at Bosch Research. Combines a strong software-development foundation from an apprenticeship at DESY with applied AI research from a Bachelor's thesis on a semantic alignment agent for natural language generation. Currently pursuing a Master's degree in AI and Linguistics at Stockholm University, with a continued interest in building intelligent, data-driven systems.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, R

Frameworks & Cloud: Spring Boot, React.js, LangChain, Databricks, Azure, OpenShift, Docker

Tools: Git, Linux, Neo4j, GraphQL, Kafka

EDUCATION

Stockholm University

Master of Science, AI and Linguistics

Stockholm, Sweden

Aug. 2026 – Aug. 2028

DHBW Stuttgart

Bachelor of Science, Business Information Systems (Data Science)

Stuttgart, Germany

Sep. 2022 – Sep. 2025

- Dual/cooperative study program: alternated academic terms with practical placements at IBM
- Thesis: Design and Implementation of a Semantic Alignment Agent for Natural Language Generation (1.4 German GPA, top 10% of the year)

Karlstad University

Exchange Semester

Karlstad, Sweden

Jan. 2024 – June 2024

Deutsches Elektronen-Synchrotron (DESY)

IHK-Certified Vocational Apprenticeship, Computer Science Expert (Software Development)

Hamburg, Germany

Sep. 2019 – July 2022

- Dual vocational training combining vocational-school coursework with on-the-job work as a Junior Java Developer at this physics research institute
- Development of a distributed file system for scientific data, dCache, in Java
- Exams passed with excellent grades (93%), top 5% of the year

WORK EXPERIENCE

Data Engineer

Bosch Research

Sep. 2025 – Now

Stuttgart, Germany

- Developed and maintained a Databricks data pipeline written in Python
- Supported the infrastructure team with platform development in MS Azure

QA Engineer (Fulltime Role)

Unitymedia via Prodapt Solutions Pvt. Ltd.

Apr. 2019 – Aug. 2019

Cologne, Germany

- Created a resource planning tool with Excel and VBA
- Test execution and test planning for a B2B platform
- Testing internal tools with IBM AS400

INTERNSHIPS

IBM Client Engineering

Intern – Vienna, Austria

June 2025 – Sep. 2025

- Developed an innovative agent-based demo using WatsonX Orchestrate for partner enablement
- Performed advanced data analysis using Python to process and extract insights from complex datasets

Intern – Singapore

Sep. 2024 – Nov. 2024

- Built and deployed a containerized application on OpenShift to analyze JVM garbage collector memory allocation in Java
- Created presentation materials for client-facing workshops

Intern – Stuttgart Ehningen, Germany

Dec. 2022 – Mar. 2023

- Built multiple prototypes for Watson OpenScale to monitor LLM performance on IBM Cloud Pak for Data
- Deployed a demo cluster on OpenShift in a successful client engagement
- Collaborated with an offshore team in India to troubleshoot and resolve issues

IBM Research

Research Intern – Dublin, Ireland

Feb. 2025 – May 2025

- High focus on development of the NLP agent for my Bachelor thesis
- Developed a custom LangChain component integrating LLaMA, DeepSeek, and Granite models into a unified interface

Research Intern – Dublin, Ireland

June 2024 – Sep. 2024

- Designed and implemented a smart evaluation framework for Large Language Models, focusing on tailored performance metrics in Python
- Containerized and deployed the application for scalable and reproducible execution

Research Intern – Zürich Rüschlikon, Switzerland

June 2023 – Sep. 2023

- Implemented a custom schema for polymorphic GraphQL in Java
- Built a small demo in Neo4j to model and visualize a knowledge graph
- Modified an existing Kafka consumer to improve data processing efficiency

IBM Consulting

Intern

Wilhelmshaven, Germany

Nov. 2023 – Jan. 2024

- Contributed to a SASPF (SAP Bundeswehr solution) project for the German Navy
- Supported a project to improve material readiness and availability

Testbirds GmbH

Project Management Intern

Munich, Germany

Oct. 2018 – Mar. 2019

- Completed crowd test evaluation, including a presentation of the results to clients
- Template development in Excel and with Power BI and R

SELECTED PROJECTS

Hippo Codes

2024 – present

- Full-stack development of a game addressing the consequences of climate change
- Sole developer responsible for the complete implementation, including the CI/CD pipeline – hippo-codes.com

Semantix

Nov. 2024 – Feb. 2025

- Built a German word-guessing minigame leveraging word embeddings with vector search powered by Pinecone
- Deployed using Vercel – semantix-green.vercel.app

Minecraft Open Database (MCODBC)

Mar. 2021 – present

- Co-developed a custom database language, Slim SQL, inspired by MySQL, in Java
- Created a small website for database requests and documentation in React.js
- Provided a REST API to interact with the Slim SQL database using Java Spring Boot

EveryOneCounts.de (Founded after a hackathon against the covid pandemic)

Mar. 2020 – Aug. 2020

- Visualized social distancing in the corona pandemic using multiple data sources
- Project went viral and I talked about it in the media – [Tagesschau](#) feature
- Developed a prototype to count customers in public spaces using 3D printing and an ESP32 in C

LANGUAGES

German – native speaker, English – business fluent, Swedish – beginner

ADDITIONAL

Volunteering: Working as a trained paramedic at events (03/2016 – 02/2020)

Interests: Machine learning, 3D printing, economics, photography, flight simulation, skiing

Driver's license: German driver's license Class B (Cars)
